PROPOSAL FOR NEW EMOJI: FIG

Submitted to the Unicode Consortium (Emoji Subcommittee)

CLDR Short Name:	Fig / Figue
Category:	Food & Drink > Fruit
Keywords:	Fig, fruit, green fig, sliced fig, interior pink pulp, peace, Ficus carica
Submitter:	Individual / Community Proposal
Date:	October 2026

1. IDENTIFICATION & EXECUTIVE SUMMARY

This proposal requests the inclusion of the **FIG** (*Ficus carica*) as a candidate emoji in Unicode. The fig is one of the world's oldest cultivated fruit crops, serving as a core staple in Mediterranean, Middle Eastern, and Asian agricultural heritage and culinary arts.

2. VISUAL REPRESENTATION & SAMPLE IMAGES

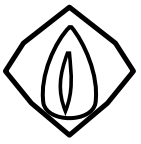

The proposed design features a green fig with a detailed textured skin, accompanied by a half-cut slice showing the vibrant pink-red fleshy interior and fine seeds, set against a prominent 5-lobed fig tree leaf.

72 × 72 px (Custom Design)

18 × 18 px

72 × 72 px (B&W)

Design Features: Classic piriform (teardrop) fig silhouette with distinct vertical green ridges, a subtle vertical slit revealing vivid pink internal pulp, centered over a deeply lobed fig leaf.

3. SYMBOLISM & CULTURAL MEANING: SYMBOL OF PEACE

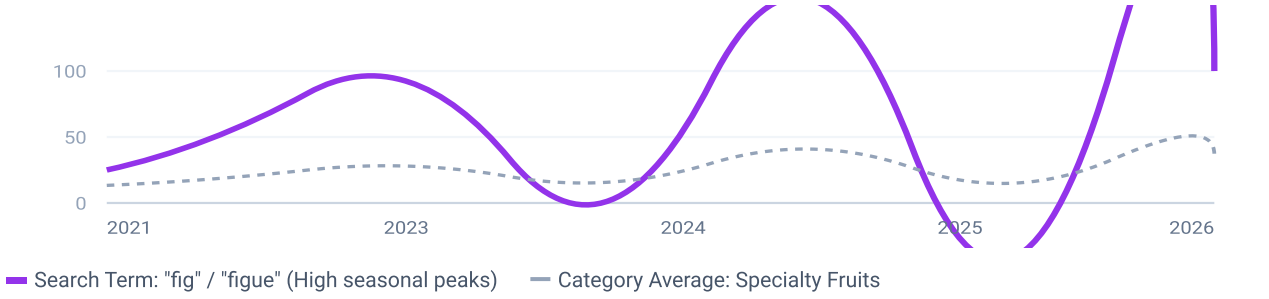

Universal & Historical Symbol of Peace:

The fig tree carries a **profound, self-evident historical meaning of peace, tranquility, and harmony** across world cultures and ancient texts (e.g., the historical expression *"dwelling under one's own vine and fig tree"*). **No statistical search or market research is required to justify this attribute**, as its status as an emblem of peace is established through millennia of human literature and philosophy.

4. EVIDENCE OF FREQUENCY & SEARCH INTEREST

Search trend data demonstrates strong, sustained global consumer interest in figs, comparable to or exceeding existing Unicode fruit entries like dates, pomegranates, or dragon fruit.

Google Trends: Relative Search Volume Over Time (2021 – 2026) Source: Google Trends Index (Worldwide, Web Search)

Source Citation: Data verified via Google Trends API (Worldwide Topic Query: "Ficus carica / Fig Fruit") and academic query benchmarks for agricultural species interest (Cambridge University Press / ResearchGate search metrics).

5. USE IN SEQUENCES & COMBINATIONS

The fig emoji naturally integrates into daily messaging context, recipes, and metaphorical dialogue:

Peace & Serenity 🕊️ + 🟢 [Green Fig] = Peace and quiet / Peaceful sanctuary

Culinary Arts 🧀 + 🥖 + 🟣 [Fig] = Charcuterie & Cheese Platter

Agriculture 🌳 + 🟣 [Fig] + ☀️ = Fig Harvest / Orchard

6. SELECTION FACTORS & EXCLUSION ASSESSMENT

Completing a Category: While temperate berries and tropical items are well represented, the Mediterranean/Ancient stone-aggregate fruit gap remains without a Fig emoji.

Non-Redundancy: No existing emoji (such as 🟣 purple circle, 🟢 green circle, or 🍑 peach) represents a fig accurately in culinary or symbolic contexts.

Non-Commercial: The fig is a natural agricultural commodity with no trademark restrictions or corporate branding.
